

AMENDMENT TO THE CLAIMS

Claim 20 (new). A method of making a relief form member for attachment as an architectural feature to an exterior wall comprising;

starting with an elongated metal member having openings therein;

bending the elongated metal member to have a channel defined by a top and sides and to have corner aids at the corners of the top and sides formed integrally from the metal member;

using fasteners, attaching the relief member to the exterior wall of structure;

applying cementitious material in a plurality of layers, at least the first layer using the corner aids as guides to control application of the cementitious material.

Claim 21 (new). The method of claim 21 further comprising;

Applying an elongated paper member on the interior of the channel and applying hot glue to hold the paper to the metal channel member.

Claim 22 (new). The method of claim 20 wherein the elongated metal member is made of wire members welded together.
